Pennsylvania Maternal and Child Health Block Grant 2020

The Maternal and Child Health Services Block Grant, Title V of the Social Security Act, is the only federal program devoted to improving the health of all women, children and families. In FY2018, 91% of all pregnant women, 98.7% of infants, and 53.7% of children nationwide benefitted from a Title V-supported service. To learn more about Title V, visit www.amchp.org.

Title V Administrative Agency:
Bureau of Family Health, Pennsylvania Department of Health

*States must provide a three dollar match for every four Federal dollars allocated.

Protecting and Improving the Health of Pennsylvania’s Families

Children and Youth with Special Health Care Needs — The Bureau of Family Health continues to reach out to families of children with special health care needs through the PA Medical Home and Special Kids Network Programs. The PA Medical Home Program provides care to children and youth, including those with special health care needs, by utilizing Practice Coordinators and Parent Advisors to offer onsite education, support and technical assistance to primary care physicians (PCPs) and partner with the Parent Education & Advocacy Leadership (PEAL) Center and other advocacy organizations to facilitate family member/caregiver engagement by showing PCPs how to recruit Parent Partners. The PA Medical Home program offers learning events to support PCPs in the process of adopting a medical home approach to primary care and integrating with mental, behavioral and oral health services. The goal is to enhance the quality of life through effective community-based coordination, communication, and improved primary health care.

Through Title V funding, the BrainSTEPS program operates in 28 Intermediate Units (IUs) and one school district. The IUs link with school districts to provide individualized support services for students who have had a Traumatic Brain Injury (TBI). The teams prepare the student and family for return to school post TBI and continue to provide outreach to increase public awareness.

Title V and other state funds support comprehensive Specialty Care Programs (SCP) for individuals diagnosed with one of six conditions: Child Rehabilitation (serving neuromuscular and orthopedic conditions), Cooley’s Anemia, Cystic Fibrosis, Hemophilia, Sickle Cell, and Spina Bifida. SCP grantees are required to dedicate a certain percentage of funds into a Patient Assistance Fund to assist with addressing critical barriers or needs. This assists with achieving the goal of the SCP which is to improve patient health outcomes by providing comprehensive care and reducing barriers to adherence to treatment plans. Other state funds also support outreach and education-based grants for individuals diagnosed with Epilepsy, Charcot-Marie-Tooth (CMT) Disease, and Tourette Syndrome. The Technology Assisted Children’s Home Program is also provided through state funds and provides for the coordination of care for technology dependent children 0-22 years of age.

Maternal and Infant Health Needs - Title V funds the breastfeeding awareness and support programs as well as safe sleep programs. The BFH, with Title V funds, continues its work with local health departments to ensure screening among pregnant and postpartum women for risk factors related to behavioral health issues, substance use disorder and interpersonal violence. Birth spacing and birth control methods are also discussed. Home visiting programs have achieved positive outcomes in reducing the incidence of low birth weight babies and repeat pregnancies. Ideally, home visitors connect with women in the prenatal period and continue to provide services for up to a year after the births of their children.

In 2018, a state Maternal Mortality Review Committee (MMRC) was created to address the serious issue of maternal mortality. The MMRC is charged with identifying pregnancy related deaths and recommending actions to prevent maternal deaths in Pennsylvania.

The Special Kids Network addresses families’ need for access to information and resources through three primary components: 1) a toll-free helpline; 2) a home visiting program utilizing Community Health Workers in an evidence-based model; and 3) identification and elimination of systemic issues for CYSHCN by building collaborations with community-based organizations, faith-based organizations, health care agencies, social service agencies and other organizations or agencies serving CYSHCN and their families.
Newborn Screening – Title V and other funds support screening and follow-up for all newborns. Newborns are screened for 10 mandatory conditions, 27 supplemental conditions, critical congenital heart defects and hearing screening. In 2017, 138,549 newborns were served. Collaborative efforts are targeted to hospitals, metabolic disease treatment centers, other specialty centers, a host of medical and allied health providers, laboratories, and others. The Newborn Screening Program uses a case management system (iCMS) to provide follow-up services for dried blood spot cases, critical congenital heart defects cases and hearing cases in one data system.

Child Health – Injury prevention is addressed through a variety of programs including the Child Death Review (CDR) and the Shaken Baby Syndrome (SBS) program promoting the safety and well-being of children by reducing preventable childhood fatalities. The Safe and Healthy Homes Program (SHHP) continues to provide guidance and interventions to reduce the risk of injuries and education to address safe and healthy homes. The BFH operates a toll-free Lead Information Line to provide information and resources on prevention, screening, abatement and regulatory issues on lead for the citizens of Pennsylvania.

Adolescent Health – The BFH aims to reduce risk factors and increase protective factors among adolescents through evidence-based and evidence-informed mentoring programs to youth.

Pennsylvania collaborates with Clemson University to improve bullying prevention infrastructure throughout the Commonwealth by developing a training and certification program for Olweus Bullying Prevention (Olweus) in community youth organizations which will supplement current Olweus activities across Pennsylvania.

There are Health Resources Centers (HRCs) operating in 11 counties. HRCs provide a variety of services including sexual and reproductive health education, confidential, individual level counseling, screening for chlamydia, gonorrhea, and pregnancy testing; referrals and direct linkages to core family planning services; and distribution of safer sex materials to high school students.

Title V funds family planning councils to provide adolescents with reproductive health counseling services as well as the Safe Teens Answers! Text hotline. Other funds support programming on abstinence and contraception to prevent pregnancy and sexually transmitted infections, and three adult preparation subjects.

Training is provided on health disparities related to sexual orientation, gender identity and appropriate standards of care for LGBTQ individuals and LBGTQ cultural competency training to medical, behavioral health and social service providers. Through various programming targeted towards LGBTQ in schools and the community, youth are offered screenings and assessments, mentoring, counseling, drop-in services, and suicide prevention training and awareness.

The Safe Spaces Project provides suicide prevention training to youth and engages in coalition building activities. The Signs of Suicide prevention program provides screening and education and aims to prevent suicide attempts, increase knowledge about suicide and depression develop desirable attitudes towards suicide and depression, and increase help-seeking behavior among youth.

Cross-Cutting Systems – This work is focused on the development of public health services and systems solidifying the foundation and growth of all the programming work throughout the BFH as it is focused on building or enhancing workforce capacity especially related to data, implementing and maintaining continuous quality improvement processes, and strengthening systems and infrastructure to enhance program delivery and address key social determinants of health.

The BFH is addressing health disparities and health equity both internally, through workforce development initiatives, and externally, through the integration of health disparities language into grant agreements as part of work on the appropriate and health-related services priority. The BFH has also broadened these efforts to include health literacy work. Feedback through client satisfaction surveys is a requirement in all new grant agreements. This will allow grantees and the BFH to understand what is working and not working in the provision of services, including how grantees and the BFH communicate.

Workforce development activities will include training for BFH staff and grantees on topics related to program decision-making and implementation, such as public health problem solving concepts, data use, evidence-based practices and the use of quality improvement and program evaluation. BFH is dedicated to increasing data utilization, data analysis, and program evaluation for decision making across all programs.

Title V funds support the Child Death Review (CDR) teams, the Sudden Unexpected Infant Death (SUID)/Sudden Death in the Young (SDY) registry, and the Pregnancy Risk Assessment Monitoring System (PRAMS). Title V funds are used to supplement the provision of these monitoring systems and activities by supporting data collection activities and the implementation of prevention strategies based on findings from all three of these data sources.

Family and consumer partnerships (FCPs) are essential components of improving the health status of MCH populations over the life span. The BFH recognizes the value of FCPs and has established multiple means of incorporating families and consumers into the Title V decision-making process.

Health Needs in Pennsylvania
The following are the current state MCH priorities as determined through the 2015 needs and capacity assessment:

- MCH populations reside in a safe and healthy living environment
- Appropriate health and health related services, screenings, and information are available to the MCH populations
- MCH populations are able to obtain, process, and understand basic health information needed to make health decisions
- Protective factors are established for adolescents and young adults prior to and during critical life stages
- Families are equipped with the education and resources he need to initiate and continue breastfeeding their infants
- Adolescents and women of child-bearing age have access to and participate in pre-conception and inter-conception health care and support
- Safe sleep practices are consistently implemented for all infants
- Title V staff and grantees identify, collect, and use relevant data to inform decision-making and evaluate population and programmatic needs
- Women receiving prenatal care or home visiting are screened for behavioral health and referred for assessment if warranted
