Minnesota

Maternal and Child Health Block Grant 2013

The Maternal and Child Health Services Block Grant, Title V of the Social Security Act, is the only federal program devoted to improving the health of all women, children, and families. Title V provides funding to state maternal and child health (MCH) programs, which serve 44 million women and children in the U.S. To learn more about Title V, visit www.amchp.org.

Community and Family Health Division
Minnesota Department of Health
Estimated State Funds, FY 2013: $6,971,759

*States must provide a three dollar match for every four Federal dollars allocated.

Protecting and Improving the Health of Minnesota’s Families

Newborn Screening – The Title V program continues to partner with the University of Minnesota, Mayo Clinic systems, and birthing hospitals statewide to support newborn bloodspot screening for genetic and heritable disorders, hearing screening for all babies and appropriate follow-up services. Over 450 newborns were diagnosed in 2011 with a condition identified through newborn screening.

Family Planning – Health awarded Family Planning grants totaling $10.5 million for two years to grantees including one county-and one university-operated clinic, eight local public health agencies, and 15 non-profit organizations. Funds also support a statewide family planning hotline.

Family Home Visiting – The Title V program supports home visiting programs in local public health departments to assist pregnant women and families. Family home visiting fosters health beginnings, improves pregnancy outcomes, promotes school readiness, prevents child abuse and neglect, promotes positive parenting and promotes health and economic self-sufficiency. All of Minnesota’s local health departments provide family home visiting services. Minnesota is also rapidly expanding the number of local health departments implementing evidence-based family home visiting programs through the federal MIECHV program.

Addressing Infant Mortality – Although Minnesota currently has one of the nation’s lowest infant mortality rate, the state has persistent racial and ethnic disparities in infant mortality especially for African Americans and American Indians. The state funds the Eliminate Health Disparities Initiative that provides funding to community-based organizations to address infant mortality and other health disparities. The Safe and Asleep campaign promotes the prevention of sleep-related infant deaths, a major cause of the infant mortality disparity.

Medical Home – The best practice standard of medical home has been advanced by the Title V CSHCN program with the MN Department of Human Services, the state chapter of the American Academy of Pediatrics and Family Voices. In late 2009 the state adopted rules for certification of clinics as Health Care Homes. Health Care Homes will serve all populations and payment methods for care coordination are formulated. To date almost 200 clinics are certified as Health Care Homes, covering approximately 2 million Minnesotans.

Follow-Along Program – In 2011, over 30,000 infants and toddlers were enrolled in this program. The Title V CSHCN provides training to local public health teams to support periodic monitoring and assessment of infants and toddlers at risk for health and developmental problems to ensure early identification, assistance and services.

Reporting and Accountability – Minnesota distributes two-thirds of MCH block grant funds to local health departments. A statewide reporting system has been developed to capture how block grant dollars are spent, the specific priorities targeted, and the outcomes that will be measured.
People Served by the Minnesota MCH Program*

Title V population-based preventive and systems building services benefit all women and children in the state. In addition, the MCH Block Grant provided direct services to the following individuals:

- 5,911 pregnant women
- 68,407 infants under one
- 10,776 children and adolescents
- 8,720 children with special health care needs
- 3,097 others
- 96,911 total served
