September is Newborn Screening Awareness Month. Newborn Screening promotes early detection and treatment of fatal and disabling conditions. Visit http://babysfirsttest.org/ to learn more about the importance of newborn screening.

We are highlighting the work that MCH professionals are doing to support newborn screening across the nation. Check out the Innovation Station Practice below to learn more:

- **Florida Newborn Screening Results (FNSR)-online access system**, Florida (Emerging, 2010)
  Screening results are often received after the child leaves the hospital. Therefore, it is up to the primary care physician to collect any repeated specimens and follow-up on the results. The goal of FNSR is to get newborn screening results into the hands of the primary care physician by providing easy online access to these results. Objectives include: Ensuring that each newborn is screened and proper follow-up is conducted; Ensuring that newborns receive a repeat screening for unsatisfactory and borderline results

Do you see a practice that you would like to replicate in your area? Get in touch with the project contact to learn about their challenges, successes, and how you can adapt the practice to fit your needs. If you decide to replicate all or part of the practice, visit our website to find out about opportunities to fund this work.

Are you also working to support newborn screening, or to address other MCH issues? Share your practice with Innovation Station to receive recognition, help others learn from your great work, and make a difference in MCH. Learn more about AMCHP’s practice categories and submission process here.
